

Plan for Restoring the Sustainable Yield of the Sierra Vista Sub-Watershed Aquifer

2004 NDAA mandated restoration of the sustainable yield of the aquifer by 2011: Identified USPP as the focal point to accomplish.

Not accomplished and **no** published plan evident to do so

6K af deficit in 2012: And an estimated 120,000 af has accumulated between 2002 and 2017

Annual deficit can be eliminated (zero af) with a recommended **PLAN** that includes 4 TNC and NRCD detention basins and 8 Stantec-like basins at prioritized location in the SPRNCA.

Needed to help defend fort and local economy and against any future **BRAC** and **Sequestration** actions.

Recommendation:

Establish a USSP member agency to take the lead in getting USSP to publish this **PLAN**
